

Report

Html pages: index.html, Sample.html, Login.html, Register.html, exam.html, success.html, View.html

- first.html (contains first question)
- second.html (contains second question)
- third.html (contains third question)
- fourth.html (contains fourth question)
- fifth.html (contains fifth question)

Tables used: (3)

- User
- Exam (Qnumber, Answer)
- score

Servlet codes: For all the above-mentioned html pages except index, Sample, success and exam.

RegisterServlet inserted user inputted values into the User table

LoginServlet Cross checked user inputted login credentials with table values

FirstServlet, SecondServlet, ThirdServlet, FourthServlet, and FifthServlet cross checked inputted answers with table values and if correct then prints correct answer else prints the correct answer. And also, they update the table value score with respect to the number of correct answers. And finally prints the marks obtained.

ViewServlet resets the score table value to 0.
